swiss manufacture

Polydentia has been developing and producing dental products in southern Switzerland for more than 47 years.

Founded in 1976, for Polydentia these past four decades have been made of passion, excellence and continuous improvement.

We successfully married our founding values – excellent Swiss quality, innovative thinking and constant product development – with the latest trends of modern conservative dentistry.

Our new corporate identity represents our vision for the future. It is our pledge and renewed commitment to keep on manufacturing excellent instruments for dental professionals all around the globe, building on forty years of experience and know-how, and actively collaborating with passionate dentists.

In the years ahead, we will continue to provide the best Swiss quality products for dental professionals to enable them to enjoy their daily practice, while helping them to improve patients' care.

Thank you for your trust,

Polydentia SA

restaurative ∞

Restaurative

Polydentia offers innovative solutions developed to attain better results in aesthetics and restoration dentistry, both for anterior and posterior restorations. Our restorative assortment entails an anterior matrix system and a collection of adult and paediatric posterior matrix systems that simplify your work flow and enable you achieve predictable direct restorations.

Our kits of sectional matrix systems include separator rings offering different separation forces, along with interchangeable extremities, high-contrast sectional matrices and anatomical wedges. These instruments make our restorative products suitable for a wide range of clinical cases of Class II cavity restorations and application techniques, even in case of low crown height teeth and wide cavity preparations

Should a more traditional approach be preferred, a circumferential system and a comprehensive selection of matrix bands are also available.

All our restorative products are Swiss-made and comply with the most rigorous national and international regulations.

Unica anterior

Unica minideep anterior

Unica anterior Introkit

developed with **STYLE ITALIANO™**

Unica anterior is the ideal matrix system for anterior restorations such as class III, IV, V, direct stratification composite veneers and shape modifications. Thanks to their contoured shape, the matrices of the system, Unica anterior and Unica minideep anterior adapt correctly to the different morphologies of all anterior teeth.

They allow the proximal and cervical margins to be restored at the same time, even in the presence of a rubber dam or gingival retraction cords, thus reducing the time needed for restoration. In addition, once the Unica matrices are positioned, they allow to visualise the final shape of the restoration, even before starting the procedure.

- Versatile system for anterior restorations
- Easy management of the whole emergence profile
- Wings for easy placement
- Contoured, anatomical shape

myQuickmat Forte kit

Complete sectional matrix system kit developed to offer strong tooth separation in order to create excellent contact points in the restoration of Class II cavities.

This kit features myRing Forte, a sectional matrix ring that adapts to both teeth of different crown heights and wide cavity preparations, thanks to its extremities (myTines Small, Medium and Large). In case of dissimilar tooth morphologies, the autoclavable and replaceable myTines can be used interchangeably to enhance matrix adaptation. The kit comprises a selection of myWedge, high-quality, anatomical interdental plastic wedges. Their hollow V-shape allows them to compress and adapt to the interproximal anatomy of teeth, preventing damage to the papilla. LumiContrast sectional matrices complete the kit's matrix assortment. These dark-blue matrices significantly increase contrast and reduce glare effect, especially while using loupes or microscopes.

- Strong separation force for tight contacts
- Suitable for teeth of different crown heights and wide cavity preparations
- Replaceable, interchangeable and autoclavable plastic extremities
- Exceptional matrix adaptation and retention
- Complete kit including myForceps

System for low crown height teeth and wide cavity preps

myQuickmat Forte Starter kit

Obtain anatomically correct Class II cavity restorations with tight contact points and natural contours using the restorative solutions included in myQuickmat Forte starter kit. The system allows you to restore teeth with different crown heights as well as teeth with large cavity preparations or missing cusps thanks to the replaceable extremity system myTines.

All components of the kit have been selected to optimise the restorative procedure, allowing quick and predictable results with minimal finishing steps.

- Restorative essentials for the recreation of tight, anatomically-correct contact points and natural contours
- Selected restorative solutions for improved matrix retention and adaptation
- Great choice of sectional matrices to optimise your Class II restorations
- One system for restoring teeth with different crown height and wide cavity preps
- Included the NEW QuickmatFLEX, titanium sectional matrices with advanced elastic memory

System for low crown height teeth and wide cavity preps

myTines Small

myTines Medium

myTines Large

myClip 2.0

All-in-one sectional matrix ring with short handles that act as forceps. There is no need for special placing tools as myClip 2.0 can be easily positioned with your fingers. myClip 2.0 features an optimal separation force that allows to create excellent contact points in the restoration of Class II cavities, making it suitable for all clinical conditions. Thanks to the ring's high-tech plastic extremities (myTines Small, Medium and Large), myClip 2.0 adapts to both teeth of different crown heights and wide cavity preparations. In case of dissimilar tooth morphologies, the autoclavable myTines can be used in combination to enhance the matrix adaptation to the proximal walls and consequently reduce the need for finishing steps. Doctors using myClip 2.0 benefit from the long lifetime of the premium-quality stainless steel ring as the extremities can be replaced should they present signs of wear and tear.

- All-in-one sectional matrix ring. No need for ring forceps
- Suitable for teeth of different crown heights and wide cavity preparations
- Optimal separation force
- Quick, easy, one-hand ring positioning
- Replaceable, interchangeable and autoclavable plastic extremities

System for low crown height teeth and wide cavity preps

See refills on page 20, 27, 30

myQuickmatrix Forceps

myQuickmatrix Forceps ensures a firm grip of the matrix when removing it during restoration.

- For easy matrix removal
- Tips with special ribbing for a firm grip
- Resistant tips in tungsten carbide

Contents	REF
myQuickmatrix Forceps, 1 pc.	5703

myForceps

myForceps is the indispensable instrument to safely place and remove all Polydentia sectional matrix rings, as myRing Classico and myRing Forte. The shaped tips ensure a firm grip of the ring during application.

- For easy placement of myRing Classico, myRing Forte and myRing Junior
- Notches for retensioning myRing Forte
- Strong and resistant
- High quality

Contents	REF
myForceps, 1 pc.	5707

Extremities for myClip 2.0 & myRing Forte
pages 10 - 12

myTines Small & Medium

myTines Small and myTines Medium are versatile extremities for myRing Forte & myClip 2.0, developed for a precise adaptation of Polydentia's sectional matrices to a wide range of clinical situations and teeth of different crown heights. In case of dissimilar tooth morphologies, the ability to combine myTines Small with myTines Medium on the same Polydentia's sectional ring provide an enhanced matrix adaptation to the teeth and a firm grip, thus reducing composite flashes and optimising stability.

- **Replaceable, interchangeable and autoclavable plastic extremities**
- **myTines Small: improved adaptation on teeth of low crown height**
- **Increased stability of the rings**
- **V-shaped for better positioning over the wedge**

Extremities for myClip 2.0 & myRing Forte
pages 10 - 12

myTines Large

myTines Large are the new extremities especially developed to be fitted on myClip 2.0 and myRing Forte to the stability of the sectional matrix rings on wide cavity preparations even in case of missing cusps. The asymmetry of the wings allows a perfect adaptation on distal and mesial cavities simply by inverting the position of the extremities. Also, the possibility of combining different myTines (Small, Medium and Large) ensures an excellent matrix adaptation and a firm grip, thus reducing composite flashes and overhangs.

- **Increases ring stability on wide cavity preparations even with missing cusps**
- **V-shaped for better positioning over the wedge**
- **Replaceable, interchangeable and autoclavable plastic extremities**
- **Asymmetric extremities' wings improve adaptation**
- **Extremities can be rotated to provide further flexibility**

myQuickmat Classico kit

Complete sectional matrix system developed to offer gentle tooth separation in order to create excellent contact points in the restoration of class II cavities. This kit features Polydentia's myRing Classico, a classic sectional matrix ring made of nickel titanium. It is reinforced to provide an optimal and gentle separation force in combination with the included Interdental Maple Wood Wedges. For the restoration of very extensive cavities, the kit also includes the extremities Delta Tubes. These anatomically shaped silicone tubes ensure optimal matrix retention and adaptation to the tooth's anatomy. LumiContrast sectional matrices complete the kit's assortment. These dark-blue matrices significantly increase contrast and reduce glare effect, especially while using loupes or microscopes.

- Optimal, gentle separation force for tight contacts
- myRing Classico and Delta Tubes entirely autoclavable
- Excellent matrix adaptation and retention
- Complete assortment of matrices and wedges

"No matrix deformation even in case of broad cavities"

Diamond²⁴

developed with **STYLE ITALIANO™**

Diamond²⁴ are anatomically shaped silicone tubes designed to be used with Polydentia's sectional matrix ring "myRing Classico". Diamond²⁴ can be oriented in 24 different combinations of shape and length ensuring an optimal matrix retention and adaption to the tooth even in case of difficult clinical situations.

- Flexible to allow to carefully bend the matrix to shape without collapsing into the cavity
- Embrace the matrix: optimal contact points
- 24 combinations to enhance the adaptability to the clinical situation
- Autoclavable and replaceable
- Customizable: cut and shape according to necessity

my junior kit

watch
the video

myJunior kit is the first sectional matrix system for paediatric dentistry, especially developed to suit smaller deciduous and young permanent teeth. The kit offers child-friendly solutions that help saving valuable chair-time and reduce the distress of children, allowing them to quickly return to their favourite activities. Two junior sectional matrix rings are included in the kit: myClip Junior and myRing Junior. These minimally invasive, safe to use, bright-coloured paediatric rings combine stability with the right separation force, that enables dentists to achieve ideal contact surfaces. In addition, the extra grip provided by the flexible extremities myTines Junior and the rounded silicone tubes ensure a better adaptation of the sectional matrices, hence preventing annoying composite flashes and overhangs.

- Child-friendly, safe to use, bright-coloured solutions
- User-friendly intuitive system
- Small sized restorative solutions that suits deciduous teeth
- Optimal separation force for tight contacts

Forceps

REF 5703
myQuickmatrix Forceps

REF 5707
myForceps

The opinion of professionals:

myClip 2.0

Dr. David Gerdolle - Switzerland

"myClip 2.0 is very easy to handle. Its extremities have a special geometry and rigidity allowing very efficient matrix positioning on the palatine and buccal walls. This saves time for the finishing steps and ensures a good proximal morphology."

myQuickmat Forte kit

Dr. Radoslav Asparuhov - Bulgaria

"The use of myQuickmat Forte Kit is extremely easy and the results are predictable – perfect seal of the margins, while ensuring an adequate outline of the restoration and tight contact points. The separating force of myRing Forte is more than enough to compensate the thickness of the already thinnest matrices available."

myQuickmat Classico kit

Dr. Giuseppe Chiodera - Italy

"An accurate reproduction of the contact point and proximal walls is a must in Class II restorations. The versatility provided by combining myRing Classico with Diamond24 offers additional flexibility in adapting the sectional matrix system to the clinical situation."

myJunior Kit

Dr. Marina Papachroni - Greece

"I regard myJunior kit as an optimal solution for paediatric treatments. The system offers the ideal tools for the treatment of primary and young permanent teeth, which allowed me to achieve an excellent restoration with less efforts and with considerable chair-time savings".

Unica anterior Introkit *developed with Style Italiano*

Dr. Jordi Manauta, DDS., Head of StyleItaliano Idea Factory - Italy

"Unica anterior is the solution to anterior restorations, whether it be class III, IV, V, shape modifications, and direct stratification composite veneers. One effective matrix for everyday anterior aesthetic and functional results".

CIRCUMFERENTIAL MATRIX SYSTEM

Quickmat All-Round Circumferential matrices

API is the Autoclavable Placement Instrument that makes Quickmat All-Round stable and easy to place. Ergonomical and easy to use, API is the All-round Star!

watch the video

myQuickmat All-round

developed with **STYLE ITALIANO™**

myQuickmat All-round is the circumferential matrix system designed to perform anatomical posterior restorations of teeth with missing structures. The easy-to-use Quickmat All-round matrices enable restorations with naturally contoured anatomies and tight contact surfaces. Thanks to API (Autoclavable Placement Instrument), positioning Quickmat All-round matrices is stable and straightforward. API provides support and prevents the tensioning spool from tilting during matrix tightening. With myQuickmat All-round circumferential matrix system, you can comfortably treat challenging cases in the posterior region, working on an obstacle-free, accessible operating field.

myQuickmat All-round is especially intended for restorations in case of:

- Missing adjacent tooth
- Teeth with missing cusps
- Tooth isolation for core build-up
- MOD's

- Beautifully contoured matrices for anatomical restorations
- Comfortable matrix positioning
- Stable matrix tightening
- Easy-to-tighten matrices
- Obstacle-free, accessible operating field

TITANIUM SECTIONAL MATRICES

QuickmatFLEX
(0.03mm / .002")

QuickmatFLEX are titanium sectional matrices developed to offer the right balance of flexibility and stiffness for optimised positioning and adaptation in tight interproximal spaces. Class II treatments with QuickmatFLEX sectional matrices and Polydentia sectional matrix rings result in predictable restorations with anatomically correct anatomies, tight contact points and smooth composite surfaces that require minimal finishing steps.

- **Ultra-thin 0.03mm**
- **Excellent resilience and elastic memory. Matrices resist deformation thanks to their elastic spring-back**
- **Ideal for both posterior and anterior restoration**

TOOTH PROTECTION MATRIX

PolydentiaPRO

PolydentiaPRO is an interproximal tooth protection matrix designed to offer excellent protection of the adjacent tooth against inadvertent bur scratches that commonly occurs during Class II preparations

- **Excellent protection of adjacent teeth during preparation**
- **Contoured and 0.05mm thick**
- **Easy to insert and remove**
- **Less polishing time thanks to scratch-free adjacent teeth**

Contents	REF
100 pcs. Polydentia PRO - Interproximal tooth protection matrices, thickness 0.05mm	5272

STEEL SECTIONAL MATRICES

Quickmat Sectional Matrices
(0.025mm / 0.01" - 0.04mm / 0.16")

myWedge

myWedge is an interproximal wedge made of hi-tech plastic material. Its innovative hollow v-shape allows it to compress and adapt to the interproximal anatomy of teeth. It prevents damage to the papilla while guiding and forming the matrix band to the anatomy of the cervical area of the tooth. myWedge's unique round-head geometry has been designed for easy handling, placement, and removal of the wedge with any standard tweezers or forceps.

- **Hollow v-shape**
- **Gripped head to prevent sliding**
- **Flashy colors for easy identification**

The Wedge

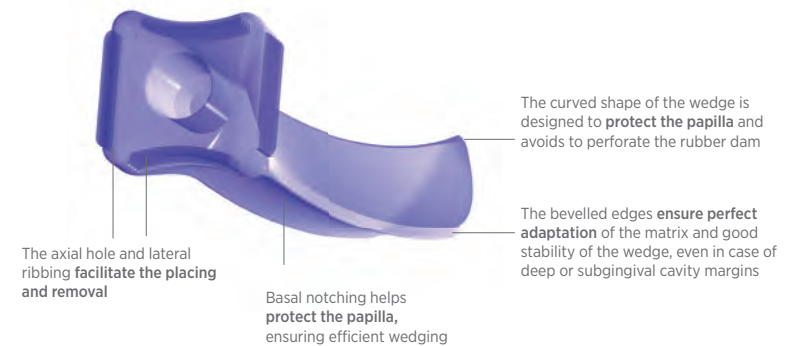

Made of hi-tech plastic material, The Wedge combines softness and elasticity, providing an optimal adaptation of the matrix along the cervical margin, even in concave zones and in widening interdental spaces.

The transparent reflecting surface of "The Wedge" permits optimum reflection of light and ensures higher polymerization rates of light cured filling materials.

Clinical Tips: Insertion angle of 45° from coronal: "The Wedge" automatically follows the anatomy of the interdental space.

A - The parallel wedge shape ensures maximum wedging up to the exit point of the wedge.
B - The special polymer allows perfect adaptation of the matrices along the entire cervical section of the cavity, also to concave shapes.

POLISHING AND ABRASIVE STRIPS

Tria-Shine

The triangular shape of these finishing and polishing strips with different widths (from 1.5 to 5.5 mm) considerably facilitates its insertion into the interdental space, while protecting the contact point, and allows easy finishing at the optimum height. These strips are available in three color-coded grit sizes and are coated with aluminium oxide.

- Innovative triangular shape
- For protection of the contact point

splinting

Splinting

Splinting is a biocompatible alternative to splints with metal retainers. Its first version, Fiber-Splint, was jointly developed with a dentist in 1989. All further versions were identically designed and developed with the recommendations resulting from our partner's experience. Our fibers are particularly suitable for all kind of dental splints, as for example stabilization of teeth which are mobile due to trauma or loose teeth resulting from periodontal disease.

They are indicated also for temporary repositioning of extracted front teeth and/or for teeth reconstructed in composite. They are very versatile and allow a fast and simple realization of highly aesthetic results. Fibers are also very comfortable and less invasive for the patient compared to metal retainers. In order to grant an excellent result, we have developed Clip&Splint fixation clips. Many Splinting products have been awarded by the renowned US magazine "The Dental Advisor".

F-Splint-Aid & Slim

F-Splint-Aid & Slim are glassfiber ribbons pre-impregnated with bonding (Fiber-Bond). F-Splint-Aid (4 mm) and F-Splint-Aid Slim (2 mm), both grant the same strength. The Slim version is particularly conceived for the treatment of surfaces with reduced dimensions. The practical black bottles protect the glassfiber from light and allow a precise dosage of the splint length (cut according to the clinical need), avoiding material waste. Each bottle contains a glassfiber ribbon useful for 4-7 applications, depending on the treatment to be performed. Every bottle is delivered with Clip&Splint, which are unique autoclavable interdental plastic clips. The product has been awarded several times by the renowned US magazine "The Dental Advisor".

- **Unique bottle dispensing system**
- **Ready to use solution**
- **With innovative Clip&Splint fixation clips**
- **Highly aesthetic results**

See refills on page 42

Glassfiber ribbons of different size and thickness. The application is very easy: the Fiber-Splint strip is saturated with bonding agent (Fiber-Bond), positioned on the etched and bonded palatal/lingual surfaces, then fixed in the interdental area with “Clip&Splint” application clips and lightcured. Fiber-splints are very versatile and realize highly aesthetic results. The practical dispenser allows to avoid waste of material.

Fiber-Splint

- Extremely thin, one-layered
- For optimum result the application should be repeated for at least five strips

Contents	Width	Length	REF

protective face shields

Vista-Tec protective face shield

The original face shields! Since 1989. Vista-Tec is a CE-certified Class II PPE protective face shield that is comfortable to wear even on long working days. It features easy-to-clean, durable and replaceable shields made of premium optical quality polycarbonate for relaxed and clear vision.

- **Ultra-light**
- **Comfortable to wear, adjustable fit**
- **Premium optical quality**
- **Disinfectable, durable and replaceable shields**
- **Category II PPE CE EN166:2001 certified**

Contents	REF

Vista-Tec Clipon & L-Clipon

Protective shields for thin-frame spectacles and loupes. Vista-Tec Clipon is a practical clip system designed to easily mount a protective shield on prescription glasses. The clips provide support for both Clipon shields and the larger L-shields, ideal for Galilean loupes. This system is ideal for spectacles and loupes with temple arms of a maximum height of 1cm.

- Ideal protection for thin-frame spectacles and loupes
- Easy to fit
- Durable, disinfectable, and replaceable shields

and
accessories

Hy-Drop

Hy-Drops are practical hygienic liquid dispensers compatible with: alcohol, chlorhexidine, hydrogen peroxide, sodium hypochlorite and distilled water. Each Hy-Drop holds 4 ml and delivers the liquid drop by drop whenever the membrane is gently pressed, providing an efficient dosage control by a singlehanded operation. In addition, several liquid dispensers can be put together to save space. Hy-Drop is available in five different colors to prevent mix-ups over the contents of each dispenser.

A gentle pressure on the membrane releases the required liquid drop by drop

- Perfect and efficient dosage of liquids
- Single-handed operation
- Includes 5 autoclavable membranes
- Autoclavable

Contents

Stop Card & Endo-Stops

Stop-Card is a simple but effective dispenser for Endo-Stops, dispensing one Endo-Stop at a time and holding it in position while the endo-instrument is easily inserted into it. The working length of the instrument can then be set with the integrated measuring ruler. Endo-Stops are made of silicone and are essential marking tools when working with endodontic files. They have a diameter of 3.5mm and a thickness of 1mm.

- Practical dispenser
- Integrated measuring ruler
- Eight different Endo-Stop colors
